Terpenoid profile screening is performed using GC-MS with Liquid Injection (Gas Chromatography - Mass Spectrometer) using Method SOP.T.40.091 Terpenoid Analysis Via GC-MS

This report shall not be reproduced, stored in a retrieval system, or transmitted in any form or by any means, without written approval from Kaycha Labs. This report is an internal document. The results relate only to the material or product analyzed. Test results are confidential unless explicitly waived otherwise. Void after 1 year from testing date. Consumption content of batch material may vary depending on sampling error. GC=Gas Chromatography, MS=Mass Spectrometry, NC=Non-validated GC parameters, ND=Not Detected, N/A=Not Analyzed, ppm=Parts Per Million, ppb=Parts Per Billion, Limit of Detection (LOD) and Limit of Quantitation (LOQ) are terms used to describe the smallest concentration that can be reliably measured by an analytical procedure. SPD=Repeatability of two measurements, which could also have determined the limit for human safety for consumption and/or inhalation. The result values are variable based on uncertainty of measurement (RM) to the sample. The RM error is acceptable from the lab upon request. The "Detection Limit" for the procedure does not include the DM. The DMs are based on 3.5. Rule 94-4-210.
